

Domains

How do I change the default auto-renew setting during checkout?

By default, the auto-renew toggle is enabled for all new domain name registrations, transfers, and manual renewals. The auto-renew toggle will be ON/GREEN during checkout on the payment page.

You can change the default status of the auto-renew toggle by following the directions below:

Enable/Disable Auto-Renew for Future Purchases

You can enable or disable the auto-renew setting by default for all new registrations, transfers, and manual renewals.

1. Log in to the Account Manager.
2. Under the "Pricing & Payment Information" section, click 'Manage Auto-Renew.'
3. Tick the checkbox to enable or disable auto-renew for new registrations, renewals, and transfers.

This will automatically set the default status of the auto-renew toggle on the checkout pages to enabled or disabled for new registrations, renewals, and transfers.

Note: This option enables or disables auto-renew for future purchases. It does not change the auto-renew status of your existing domains and services. To enable or disable auto-renew for individual domain names, follow the steps provided here: [How to Enable/Disable Auto-Renew](#).
