

Domains

How to transfer a .UK domain name?

To transfer a .UK domain name to 1st Domains, firstly initiate the transfer from our web site. You can do that [here](#).

Once you have initiated the transfer, a 7 day window will be opened for your domain name. You will then need to contact your current Registrar within 7 days and ask them to change the UK Registry TAG for your domain name to ENOM. This is the UK Registry TAG for our provider.

Once you have done this, we will email you to confirm when the transfer has completed, usually within 72 hours.

It is important that you change the TAG with the current registrar(losing registrar) otherwise the transfer will fail.
