

# DNS

## How do I change the Name Servers (DNS) for my domain name?

Name servers are a fundamental part of the Domain Name System (DNS), which is the system that translates human-readable domain names into IP addresses that computers use to locate each other on the internet. Name servers are responsible for responding to DNS queries by providing the IP address associated with a domain name.

To change the Name Servers (DNS) for your domain name, follow these steps:

1. **Log in** to your 1st Domains account and click on **'Manage Domains & Services'**.
2. Select the domain name you wish to delegate from the list.
3. Click on **'Configure Name Servers'**.
4. Turn the Parking Status to **'Off'** to enter the Name Server information you have been provided.

Please allow **24 - 48 hours** for the DNS change to propagate.

**Note:** If you delegate your domain names to a DNS host, our free services will no longer be available. However, you can switch back to us at any time.

Delegating DNS away from 1st Domains will remove the **'Manage Email Forwarders'**, **'Configure URL Redirection'**, and **'Manage DNS Zone Records'** links from the Domain Manager. To re-enable these services, you will need to park your domain name back with 1st Domains.
