DNS

How do I enable services after transferring my Domain Name to 1st Domains?

When you transfer your domain name to 1st Domains, your DNS servers remain delegated to your previous host to avoid interrupting any existing services. If you wish to use our services, you will need to park your domain with 1st Domains.

IMPORTANT: Parking your domain will update the name servers to ours. However, it will NOT transfer the current DNS zone records to 1st Domains' name servers and may affect services you had set up with your previous host. You will have to replicate your existing zone records on your previous DNS host to our name servers. Please contact 1st domains if you are unsure about this process.

Parking your domain name

1. Login to the Account Manager and select 'Manage Domains & Services'
2. Select the domain name you wish to manage from the list
3. Click on 'Park Domain Name'
4. Turn the parking status slider to 'On' and approve the confirmation message.
5. You can now return to the domain manager, and configure your services under the links, 'Manage Email Forwarders' and 'Configure URL Redirection' and 'Manage DNS Zone Records'.
