Web hosting

How do I change the FTP Password?

FTP stands for **File Transfer Protocol**, a standard network protocol used to transfer files from one host to another and is commonly used for uploading and downloading files to and from a web server.

Change your FTP password by following these steps:

1. Login to your 1st Domains Account
2. Click on 'Manage Domains & Services'
3. Click on the domain name in the list
4. Click on 'Web Hosting Control Panel' to be logged into Plesk Control Panel
5. Under the 'Hosting & DNS' tab, click on 'Web Hosting Access' or 'Hosting'
6. If using the "Web Hosting Access" option. Under the System User enter or generate a new password. Click on Ok
7. If using "Hosting Settings" scroll down the page and look for Webspace settings. Under there you will have a system user's credentials. And it is here that you generate or add a new password. Click Save at the bottom.
8. Make sure you note that down as you will need that password to use with your FTP client.

I**mportant:** Make sure your FTP password is strong. So, use capital letters, numbers, and special characters throughout the password. Using the generator will generate a strong password for you.
